

Exploring Principles of Cultural Adaptation in Designing Caregiving Interventions

Join us for a two-part conversation among a group of researchers to explore the challenges they face in designing new – or adapting existing – programs to enhance caregiving mastery that are culturally sensitive and appropriate and the principles they apply in addressing these challenges.

Conversation Jointly Sponsored by:

Emory Roybal Center for Dementia Family Caregiving Mastery

University of Rochester Roybal Center for Social Ties and Aging Research

Emory's Center for Health in Aging

This conversation will be moderated by Dr. Fayron Epps, Emory University, and Dr. Lauren Parker, Johns Hopkins University

Monday, September 25th <i>1:30p-3:00p Eastern</i>	Challenges in Cultural Design and Adaptation	<ul style="list-style-type: none"> • Mapping Researchers Understanding of the Problem
Monday, October 2nd <i>1:30p-3:00p Eastern</i>	Principles Guiding Cultural Design and Adaptation	<ul style="list-style-type: none"> • Identifying and Applying Key Principles of Adaptation

These webinars are intended for researchers engaged in the development and testing of interventions to strengthen and support the work family members and friends perform to provide care and support for persons living with dementia illnesses. Considerations of the context of caregiving, including the cultural context within which it occurs, is essential in intervention design. The Rochester and Emory Roybal Centers, like other Roybal Centers across the country, can be sources of support for efforts to develop and test such interventions.
